EE 1.12 FEATURES

True Throttle Action

With a twistgrip throttle, Husqvarna Motorcycles' EE 1.12 allows young riders to discover how to control power from a young age. Learning how to use a throttle correctly is a fundamental, and very valuable, skill that all riders will learn on the EE 1.12.

Quick Charge Battery

The removeable Lithium-ion battery has a user-friendly power-tool style interface for quick and easy changes. Fully charged spare batteries extend riding time if and when required for the EE 1.12 offering up to one hour of riding time. Quick charging means a completely flat battery can be recharged in one hour.

Ride Modes

The EE 1.12 features three ride modes. For new riders, the training mode has a top speed of 8 km/h with the transitional mode slightly higher at 11 km/h. For more competent riders, or those who have safely developed their skills using the first two settings, the advanced mode allows for speeds up to 14 km/h.

Graphics

Styled in line with the latest offroad machines from Husqvarna Motorcycles, the EE 1.12 features a classic, Swedish-inspired colour scheme. Complete with a blue anodised bar mount and a small selection of Husqvarna Factory Racing's Sponsor logos, the EE 1.12 allows youngsters to imitate their racing heroes.

Lightweight

At Just 7.7 kg including the battery, the EE 1.12 is lightweight with most of the weight positioned low on the frame. This means it is easy to handle, boosting children's confidence as they develop their riding skills. In addition, it allows them to pick up their balance bike should they need to. Additionally, the EE 1.12 can easily be lifted into the back of the car and transported to a safe riding location, if needed.

Low Seat Height

With an Ultra-Low seat height of 33 cm, young riders can confidently touch the ground when starting and stopping. This allows children to easily dab with a foot while riding to maintain their balance and forward momentum, should they need to. The EE 1.12 is perfectly suited to 3-5 year old children weighing up to 34 kg with a inside leg length of 35-51 cm. As riders grow in size, the seat height can adjusted easily.

Brake

With just a rear brake, learning to slow down safely is easy with the EE 1.12. The lever is placed on the left side of the handlebar and is always within easy reach.

Frame

Manufactured from strong aluminium and tig-welded to ensure a durable construction, the frame provides modern ergonomics with the placement of seat, footrests, and handlebars within each reach. This design encourages correct body and foot positioning to ensure children develop the perfect riding technique from a very young age. The BMW style fork is made from steel to be capable of handling offroad terrain.

Tapered Footrest

Comfortably positioned for riding either sat down or stood up, the footrests allow youngsters to familiarise themselves with the layout of a full size motorcycle from a very young age.
